Issued: 20 Aug 2019 07:39 Provider Comments:

Arrived: 20 Aug 2019 08:52 Service Type: New

Follow-up action: No Further Action

Clinical Information: 6 MONTH REVIEW PREVIOUS 4.57

Financial Details:

Serum prostate specific antigen level (XabAM)

Specimen: Blood

Provider Specimen Comments: Sample received centrifuged.

Collected: 19 Aug 2019 08:54

Investigation	Normality	Result
Serum prostate specific antigen level (XabAM)		3.97 ug/L [0.0 - 5.0] Please note: The limited sensitivity of this test in relation to diagnosis of carcinoma of the prostate means that a normal result cannot exclude this possibility with certainty. A repeat in 3-6 months is recommended for values between 2.5 ug/L and the stated age related upper limit of normal.

Laboratory Service Provider: Royal Devon & Exeter NHS Trust (Healthcare Organisation)

Laboratory Service Provider: General Pathology (Department)
